***Terminal Disclaimer***

The terminal disclaimer filed on 7/10/2008 disclaiming the terminal portion of any patent granted on this application which would extend beyond the expiration date of Patent 6,981,072 has been reviewed and is accepted. The terminal disclaimer has been recorded.

***Response to Arguments***

Applicant's amendments to Claims filed 07/10/2008 and Terminal Disclaimer in response to the previous office actions (remarks filed on 7/5/2007; 1/30/2008 and 7/10/2008) have been fully considered to be persuasive.

***Allowable Subject Matter***

Claims 1-9, 11-19, 21-27, 29 and 31 – 40 are allowed and renumbered as 1 – 36.

The following is an examiner's statement of reasons for allowance: The Admitted prior art Sibert U.S. Patent 7,124,170, discloses a secure processing unit that can perform both security functions and other information appliance functions using the same set of hardware resources. The secure processing unit includes an internal memory unit that includes a unique identifier for the secure processing unit, a private cryptographic key, a public cryptographic key, and a cryptographic certificate linking the unique identifier and the public cryptographic key. The processor security registers may contain access control data for restricting access to certain memory regions to predefined software components and/or processor modes.

However, the admitted prior art does not disclose, teach or suggest, "A method, in a multiprocessor system, the multiprocessor system comprising a control processor and a plurality of controlled processors, the method comprising: selecting at least one controlled processor of the plurality of controlled processor to operate in a shared operational state; selecting a second controlled processor from the plurality of controlled processor to operate in an isolated operational state; configuring the at least one first controlled processor of the multiprocessor

system to be in the shared operational state, wherein the shared operational state causes the at least one first controlled processor to operate using a common memory accessible by the plurality of controlled processors in the multiprocessor system; configuring the second controlled processor of the multiprocessor system, via loading and executing initialization code in the second controlled processor, to be in the isolated operational state, wherein the isolated operational state causes a local memory associated with the second controlled processor to be not accessible by the at least one first controlled processor; executing first code within the second controlled processor in a secure manner by virtue of the isolated operational state; and executing second code within the at least one first controlled processor in an unsecured manner by virtue of the shared operational state."

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Any inquiry concerning this communication or earlier communications from the examiner should be directed to PRAMILA PARTHASARATHY whose telephone number is (571)272-3866. The examiner can normally be reached on 8:00a.m. to 5:00p.m..
